Jan. 2022 - Sept. 2024	Full-stack DevOps Engineer at Justitiele Informatiedienst (Judicial Information Service / Justid) in Almelo.

STRENGTHS

I quickly grasp new information and take ownership of programming, design and test challenges, excelling in environments that demand motivation and adaptability. While I take pride in working independently and ensuring high-quality results, I also value collaboration when needed. I am driven by continuous learning and inspired by exploring creative possibilities.
I have affinity with visual content, automated and creative solutions, increasing effectiveness, intuitive user interaction & (research in) digital development

CERTIFICATES

PSM Scrum Master 1 (Scrum.org) - 2021
OCA Java SE 8 Programmer (Oracle) - 2022

FOLLOWED COURSES

IT Academy Noord-Nederland
Bootcamp Java Developer
2020 (3 months)

Instructed courses
Ethical Hacking
Agile Tester
DevOps in practice

Udemy courses
Robot Framework essentials
Kubernetes

RECENT ACCOMPLISHMENT

From february until august 2024 I have been working on a new innovative way to help judges and public defenders in the Netherlands by building a completely new digital service reusing information they previously had to collect from long and unstructured rapports and remodeling it in smart pattern-friendly structures with tailored business rules.

This application, named "The Green Folder", (as a translated reference to the physical green folder which had been used in many older cases) has proven to be very time-efficient in the judicial work process and is praised by users for it's overal friendly and intuitive usability.

This project was conducted in a small agile team of six driven software professionals, in which I held the position of one of the two lead developers. This experience of setting up a new product in direct consultation with some final users and key stakeholders and it's corresponding success, is an accomplishment I am most proud of.
